# NEW!

## DECA-DRY

### TOTAL-TRANSFER

1. Fold back protective backing sheet. Position image to be transferred by aligning blue shaded area printed on top surface of sheet.

2. Burnish outer edges of blue shaded area and portions of center.

3. Lift plastic sheet carefully. Image will transfer as a unit.

For maximum adhesion reburnish image using backing sheet.

### DECA-DRY

**TOTAL-TRANSFER** SHEETS

allow quick, easy,  
professional transfer  
of intricate images  
like these:

## TRANSFER IMAGES AS A UNIT!

Deca-Dry **TOTAL-TRANSFER** Sheets present a new dimension in the dry transfer concept. This revolutionary process answers the demand for a method of transferring intricate printed matter containing fine detail and light line weights.

Now, the most complex designs transfer with the same ease and accuracy characteristic of all Deca-Dry products.

## HOW TO USE

To transfer Deca-Dry **TOTAL-TRANSFER** images, merely burnish the edges and rub lightly in the center. It is not necessary to burnish the entire image. Image will transfer in one unit with no broken lines or particles.

There is a thin, protective transparent film between the image and the adhesive. Because this film is transparent, Deca-Dry **TOTAL-TRANSFER** Sheets have a blue area on the top surface of the plastic sheet. This shaded area indicates the outside limits of the image to be transferred.
